# Plate Cooler Delay Unit

## Saving Grace...

With water preservation such a burning issue and bank accounts bled dry, it's refreshing to find a sparkling little package that saves both H<sup>2</sup>O and cash.

The Plate Cooler Delay Unit from ATL keeps cold water flowing through your plate cooler just long enough to chill residual milk and not a moment longer. Water saved; Milk saved; Money saved... And it looks rather neat too!

**Thermal Overload Trip to Protect the Entire Unit**

**Simple Rotary Controls to set the Plate Cooler Delay Time  
(0.5-35 Seconds)**

**Manual (Continuous Running) Switch**
