

Auto-ID for Rotary Parlours

The ATL Rotary Auto-ID system allows individual rations to be delivered and/or individual milk yields to be stored against cow records automatically.

ATI**ROTARY
AUTO-ID
SYSTEM**

The Auto-ID System that works with you...

The system is very simple to use - the system identifies each animal using individual stall antennae. They are identified, fed their individual rations and/or their milk yield is stored for future use. If the cows have a health attention set against them, the cow number and stall number are announced over a loud speaker system. The system seamlessly links into the Micro Milk Meter system and ATL Cowculator 2010 PC software providing the following features:

- Milk yield measurement - stores milk yields for multiple lactations covering the animals entire lifetime
- Production rate - millilitres of milk produced per minute since the previous milking - low yield attention activates if below calculated value
- Loud speaker announcement of health attentions
- Display of low yield attention at cups off position
- Optional automatic retention of slow milkers
- Special ACR setting for slow milkers
- Mastitis quarter loud speaker announcement and attention displayed on milk meter control panel
